

# Mercury Waste LLC.

## PROJECT OBJECTIVE

Reduce mercury levels in the building for occupant safety, while designing an HVAC System that was energy efficient and environmentally friendly.

## PROJECT OVERVIEW

Designed and installed a 100% outside air system with heat recovery. Installation of a carbon based filtration system to remove mercury particles from working environment.

## PROJECT RESULTS

Significantly improved working environment due to reduced mercury levels. Improved building ventilation and cleaner working environment. Minimized energy usage while improving building ventilation.
